

ABSTRACT OF THE DISCLOSURE

The present invention relates to an absorbent article comprising a topsheet, a backsheet, and a valving means, the valving means comprising at least one one-way valve and a connection means which permits the connection of a pumping means, wherein the valving means allows air to be distributed into one or more regions of the article. The valving means of the article allows air to be discharged into the article in a region between a wearer's skin and the product.
